

Pull up banners: A4 and A3 desktop banner dimensions

Aim: To provide instruction on how to correctly set up A4 and A3 desktop promo banners

Please use an appropriate program such as Adobe InDesign to format your pullup banner artwork. If you do not have InDesign then it is best to ask UniPrint to design your banners for you.

Unlike the larger free standing banners, neither the A4 or A3 desktop banners require any grip area at the base or top of the document to roll inside the banner mechanism. Therefore the document can be set at the correct size (either A4 or A3) with 3mm bleed on each side.

When formatting the document and providing the finished file for printing, please remember the following:

- Images are to be at least 300dpi at the final size used in the banner;
- Background colours or images are to extend to the bleed area on each side of the document;
- Keep important text at least 5mm away from the edges of the visual area;
- Artwork is to be in CMYK;
- Supply the artwork at 100% size;
- Supply the artwork as a print-quality pdf file;
- Crop marks are to be included.

Pull up banners: Premium 400 desktop banner dimensions

Aim: To provide instruction on how to correctly set up the Premium 400 desktop banner.

Please use an appropriate program such as Adobe InDesign to format your pullup banner artwork. If you do not have InDesign then it is best to ask UniPrint to design your banners for you.

The visual area of the Bannerbug 400 is 400mm wide x 900mm high. However the artwork needs to be formatted to allow for the grip at the top of the banner, and the area which rolls into the base of the banner.

The document should be set at 400mm x 1125mm. This allows for 25mm for gripping the rail at the top, and 200mm to install into the base unit, which is consealed.

Allow 3mm of bleed on the top and sides of the document, while allowing 40mm bleed where the image meets the unit.

When formatting the document and providing the finished file for printing, please remember the following:

- Images are recommended to be 200dpi at the final size used in the banner;
- Background colours or images are to extend to the bleed area on each side of the document;
- Keep important text at least 5mm away from the edges of the visual area;
- Artwork is to be in CMYK;
- Supply the artwork at 100% size;
- Supply the artwork as a print-quality pdf file;
- Crop marks are to be included.

Pull up banners: Budget Travel 600 dimensions

Aim: To provide instruction on how to correctly set up a Budget Travel 600 pullup banner.

Please use an appropriate program such as Adobe InDesign to format your pullup banner artwork. If you do not have InDesign then it is best to ask UniPrint to design your banners for you.

The visual area of the budget 600 banner is 600mm wide x 1800mm high. However the artwork needs to be formatted to allow for the grip at the top of the banner, and the area which rolls into the base of the banner.

The document should be set at 600mm x 1950mm. This allows for 10mm for gripping the rail at the top, and 140mm to install into the base unit, which is consealed.

Allow 3mm of bleed on the top and sides of the document, while allowing 40mm bleed where the image meets the unit.

When formatting the document and providing the finished file for printing, please remember the following:

- Images are recommended to be 100dpi at the final size used in the banner;
- Background colours or images are to extend the full length of the grip area, as well as to each side;
- Keep important text at least 5mm away from the edges of the visual area;
- Artwork is to be in CMYK;
- Supply the artwork at 100% size;
- Supply the artwork as a print-quality pdf file;
- Crop marks are to be included.

Pull up banners: Budget and Standard 850 dimensions

Aim: To provide instruction on how to correctly set up either a Budget Travel 850 or Standard 850 pullup banner.

Please use an appropriate program such as Adobe InDesign to format your pullup banner artwork. If you do not have InDesign then it is best to ask UniPrint to design your banners for you.

The visual area of the budget 850 and standard 850 banner is 850mm wide x 2100mm high. However the artwork needs to be formatted to allow for the grip at the top of the banner, and the area which rolls into the base of the banner.

The document should be set at 850mm x 2290mm. This allows for 10mm for gripping the rail at the top, and 180mm to install into the base unit, which is consealed.

Allow 3mm of bleed on the top and sides of the document, while allowing 40mm bleed where the image meets the unit.

When formatting the document and providing the finished file for printing, please remember the following:

- Images are recommended to be 100dpi at the final size used in the banner;
- Background colours or images are to extend the full length of the grip area, as well as to each side;
- Keep important text at least 5mm away from the edges of the visual area;
- Artwork is to be in CMYK;
- Supply the artwork at 100% size;
- Supply the artwork as a print-quality pdf file;
- Crop marks are to be included.
