SEEK WISDOM

Pull up banners: Premium 850 dimensions

Aim: To provide instruction on how to correctly set up a Premium 850 pullup banner.

Please use an appropriate program such as Adobe InDesign to format your pullup banner artwork. If you do not have InDesign then it is best to ask UniPrint to design your banners for you.
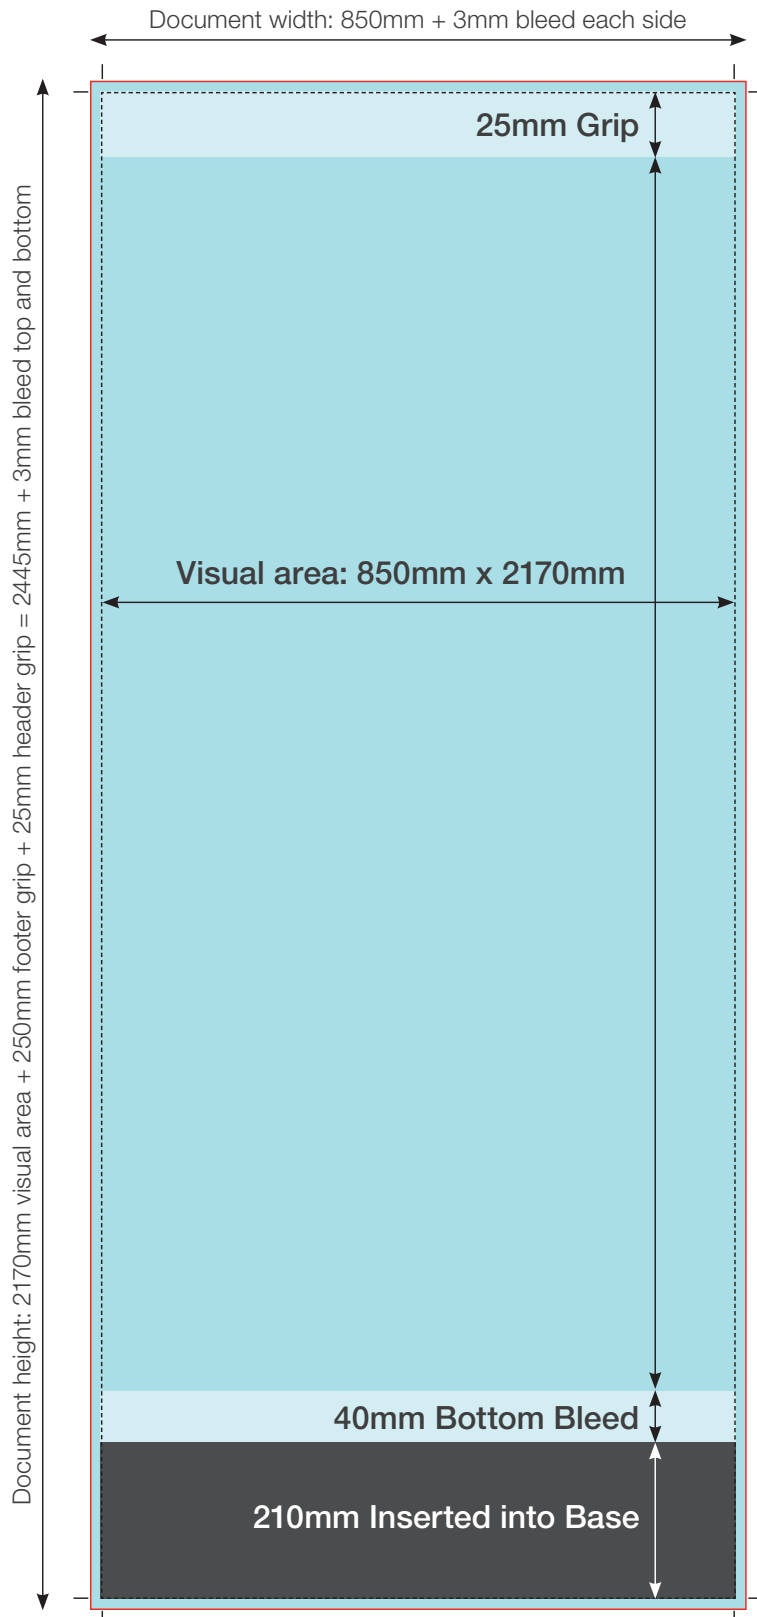

The visual area of the premium banner 850 is 850mm wide x 2170mm high. However the artwork needs to be formatted to allow for the grip at the top of the banner, and the area which rolls into the base of the banner bug.

The document should be set at 850mm x 2445mm. This allows for 25mm at the top, and 250mm to install into the base unit, which is consealed.

Allow 3mm of bleed on the top and sides of the document, while allowing 40mm bleed where the image meets the unit.

When formatting the document and providing the finished file for printing, please remember the following:

↘ Images are recommended to be 100dpi at the final size used in the banner;

↘ Background colours or images are to extend the full length of the grip area, as well as to each side;

↘ Keep important text at least 5mm away from the edges of the visual area;

↘ Artwork is to be in CMYK;

↘ Supply the artwork at 100% size;

↘ Supply the artwork as a print-quality pdf file;

↘ Crop marks are to be included.

Document width: 850mm + 3mm bleed each side

Document height: 2170mm visual area + 250mm footer grip + 25mm header grip = 2445mm + 3mm bleed top and bottom

25mm Grip

Visual area: 850mm x 2170mm

40mm Bottom Bleed

210mm Inserted into Base

Pull up banners: Premium 1200 dimensions

Aim: To provide instruction on how to correctly set up a Premium 1200 pullup banner.

Please use an appropriate program such as Adobe InDesign to format your pullup banner artwork. If you do not have InDesign then it is best to ask UniPrint to design your banners for you.
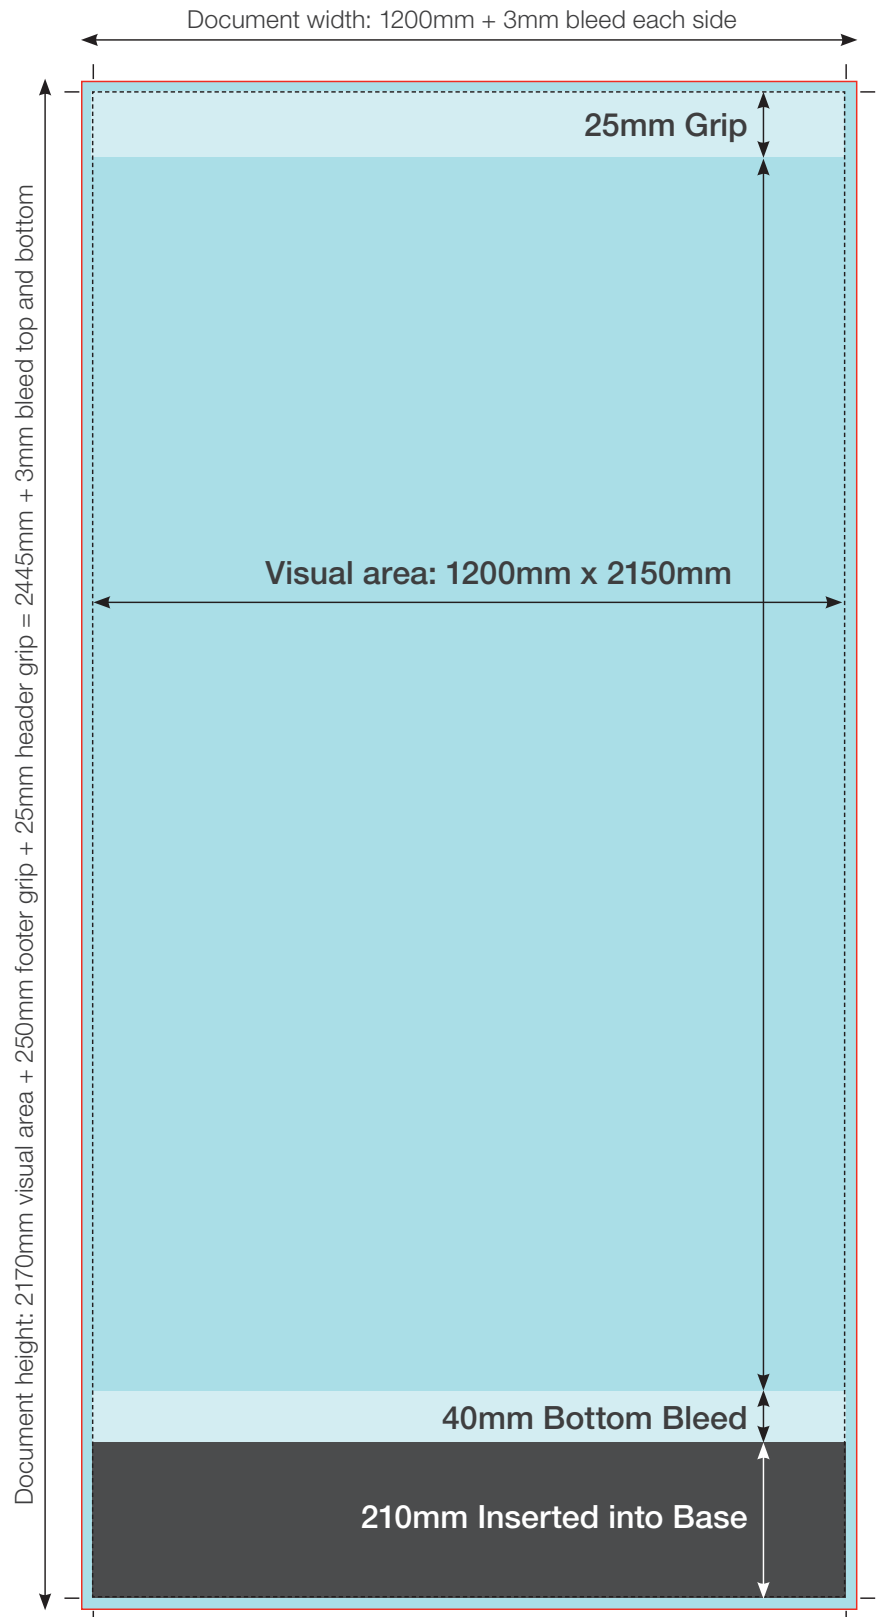

The visual area of the premium banner 1200 is 1200mm wide x 2170mm high. However the artwork needs to be formatted to allow for the grip at the top of the banner, and the area which rolls into the base of the banner.

The document should be set at 1200mm x 2445mm. This allows for 25mm at the top, and 250mm to install into the base unit, which is consealed.

Allow 3mm of bleed on the top and sides of the document, while allowing 40mm bleed where the image meets the unit.

When formatting the document and providing the finished file for printing, please remember the following:
