

PVC Banner – dimensions

Aim: To provide instruction on how to correctly set up the artwork for PVC Banners

PVC Banners are great cost effective ways to advertise your event or message.

Banners are waterproof and suitable for indoor and outdoor use.

We only rate them 6-12 months externally due to harsh conditions of weather.

Banners can be any size and also printed single and double sided.

For double sided banners and the artwork is the same on both sides, only one page of artwork is required and will be duplicated.

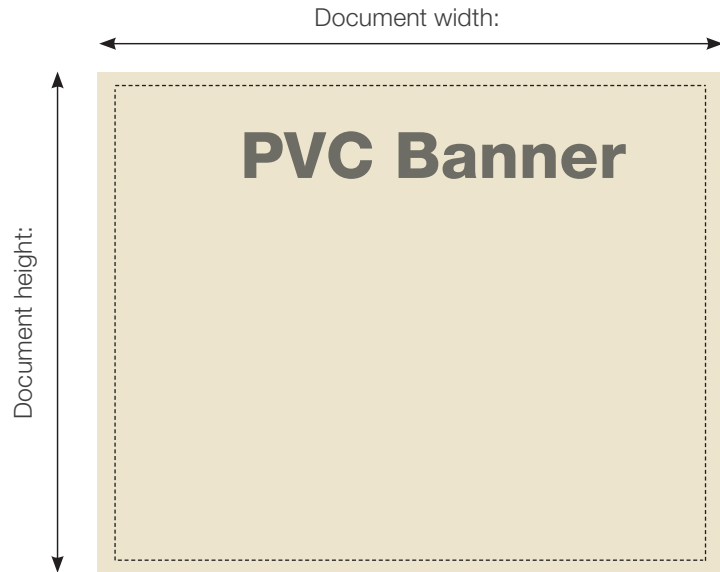

If different please use two pages.

Please supply artwork at 100% or if too large please supply at 10%.

All text converted to outlines and strokes converted.

No bleed is required for banners but please keep important text away 50mm from the edge due to the hemming process once the banners are sewn.

Any questions please email uniprint@uwa.edu.au for assistance.

Please keep text 50mm away from edges
